Course Description

This course looks at the field of counselling and psychotherapy from 3 perspectives: theoretical frameworks, intervention strategies and techniques, and the practitioner’s role and skills. Both traditional and emerging approaches will be covered. Additionally, an entire class will be devoted to research issues specific to this field.

The grading scheme of this course aims to create an opportunity for deeper study, thus there is no one all-encompassing exam and class work is distributed throughout the course. There is an assignment for every class, regular journal entries, 4 mini-exams, a presentation and a paper.

Course Objectives

Students are expected to gain:

- a familiarity with traditional approaches and emerging trends in the field of counselling and psychotherapy.
- understanding of the connection between the methodology that is employed and the psychotherapeutic philosophy and goals that shape it.
- an appreciation of the qualities and skills practitioners need to develop in order to successfully apply their theoretical knowledge.
