Course Prerequisite(s): Course prerequisites are strictly enforced.
- HH/PSYC 2021 3.00 (Statistical Methods I)

Course Prerequisite or corequisite(s):
- HH/PSYC 1010 6.00 (Introduction to Psychology), with a minimum grade of C when used as a prerequisite.

Course Credit Exclusions
Please refer to York Courses Website for a listing of any course credit exclusions.

Course website: Moodle

Course Description
This course builds on material presented in Statistical Methods I. Students will gain a better understanding of the statistical procedure used by researchers in the behavioural sciences, in addition to appropriate use and interpretation of statistical results. Topics that will be covered include review of basic statistical methods such as hypothesis significance t-tests for independent and related measures, Analysis of Variance (ANOVA) for independent and repeated measures, factorial designs, multiple comparisons (post-hoc analysis), simple and multiple linear regression, and non-parametric techniques. Data analysis using statistical software will be carried out with the open-source software R (www.r-project.org) and the free version of RStudio (www.rstudio.com).
Course Textbook:

https://compcogscisydney.org/learning-statistics-with-r/

* Note that the textbook can be either downloaded as a pdf or purchased in hard copy on the text website.

Program Learning Outcomes

Upon completion of this course, students should be able to:

1. Compute inferential statistics for univariate linear models (ANOVA, regression).
2. Interpret and report the results of inferential statistics for univariate linear models.
3. Recognize the limits of inferential statistics.

Topics Covered

- Review of basic statistical concepts
- One-way Independent Groups ANOVA (with contrasts)
- Two-way Independent Groups ANOVA (with interaction and contrasts)
- One-way Repeated Measures ANOVA (with contrasts)
- Correlation (including partial correlation)
- Simple Regression
- Multiple Regression

*Effect size is included as part of all inferential statistics covered in this course.

Specific Learning Objectives

Upon completing all learning components designed for this course, students will be able to:

- Understand the nature of statistical data in the field of psychology.
- Identify type of variables (continuous, categorical) and investigate relationships between variables.
- Construct, present, interpret and report on graphical displays, summary statistics, confidence intervals, significance tests (e.g., $p$-values).
- Know for what objectives and under what conditions a statistical method is applicable.
- Verify that data satisfy the conditions required for conducting a statistical analysis and the research objectives are compatible with the objectives of the statistical methods being used.
- Identify and investigate the impacts of outliers in data analysis.
- Realize common misconceptions and know how to avoid such interpretations.

Description of Course Assessments

1. **Pop Quizzes in Lectures (5%)**:

Pop quizzes will be given in the lectures. The pop quizzes will be very easy. They will be based on the lecture notes and homework questions. Each pop quiz will have only one question and will take approximately 5 minutes to complete. The pop quizzes begin in the second week of the course. There are 11 pop quizzes scheduled in the term. Missed pop quiz receives a zero, but the lowest score (e.g., one of the zeros, if you have any) will be dropped. The pop quizzes will be posted on our Moodle page for the course. You will submit your answer online. If there is an issue with having an access to the internet, you may use a paper to write your answer to a pop quiz and submit it to Asal in class.

2. **Assignments (4 x 7.5% = 30%)**:

There are four assignments for the course that requires you to analyze data (including using R) and write up the results of the studies. You will be given the assignments one week before they are due. Please note that you will be deducted 10% (of the 7.5% allotted to each assignment; i.e., 0.75% of your final grade) for each day (not including the weekends) that your assignment is late. Typed written report of each data analysis with its R outputs are submitted at the beginning of a lecture when the assignment is due.

3. **Midterm Test (25%)**:

There is one midterm test scheduled for 1-hour and 30-minutes in the course, which will be held during class on Thursday Feb. 28th. The midterm test is based on the material covered in lectures from Weeks 1 to 6. Weekly homework questions are good preparation for the test. The midterm test is a combination of multiple-choice and problem-based questions that aims to assess your understanding of conceptual ideas and your knowledge of interpreting R input/output (you will not need to write out R codes on the test). You are allowed to use a basic calculator during the test, one that allows you to add, subtract, divide, multiply and take a square root of a number (phones, tablets, etc. cannot be used as calculators). You may bring to the test a one letter-sized (8.5” x 11”) hand-written aid sheet using only one side of the page. Statistical tables that you may need will be provided.
4. Final Exam (40%):
The final exam will be cumulative and covers all course material. The format of the final exam is similar to the midterm test. However, the final exam is scheduled for three hours and will be held during winter examination period (April 5th – 20th). You may bring to the final exam a one letter-sized (8.5” x 11”) handwritten aid sheet using both sides of the sheet. Statistical tables that you may need for the exam will be provided. You need to use a basic calculator for the exam (note: electronic devices cannot be used as calculators and are not permitted during the exam).

Grading as per Senate Policy
The grading scheme for the course conforms to the 9-point grading system used in undergraduate programs at York (e.g., A+ = 9, A = 8, B+ = 7, C+ = 5, etc.). Assignments and tests will bear either a letter grade designation or a corresponding number grade (e.g. A+ = 90 to 100, A = 80 to 89, B+ = 75 to 79, etc.) (For a full description of York grading system see the York University Undergraduate Calendar - Grading Scheme for 2018-19)

Late Work/missed Tests or Exams
Students with a documented reason for missing a course test, such as illness, compassionate grounds, etc., which is confirmed by supporting documentation (Attending Physician Statement which can be found at: http://myacademicrecord.students.yorku.ca/pdf/attending-physicians-statement.pdf may request accommodation from the Course Instructor. Further extensions or accommodation will require students to submit a formal petition to the Faculty.

Important New Information Regarding Missed Tests
For any missed tests or late assignments, students MUST complete the following online form within 48 hours of the missed test: HH PSYC: Missed Tests/Exams Form. This form will be received and reviewed in the Psychology undergraduate office. Failure to complete the form within 48 hours of the original deadline will result in a grade of zero for the test.

Missed Test: Please note in completing the online form you will also need to include formal documentation to verify the circumstances for missing the test (e.g., completed Attending Physician’s Statement Form) – this documentation should be submitted within 7 days of the missed test. Upon completion of the online form and after receipt of your supporting documentation you will have two options:

1. *One opportunity to write a make-up test (this will be scheduled at a day and time to be announced by the instructor and may take a different form from the original test.
2. Opt to have the weight of the missed test added to your cumulative final exam.

*Note: If the make-up test is missed, option 2 will take immediate effect provided that the appropriate notification and documentation were received.
Missed Final Exam: If final exam is missed, the student is required to complete the online form **within 48 hours of the missed exam** and provide formal documentation (i.e., Attending Physician Statement Form and Final Exam Deferred Standing Agreement Form) **within 7 days of the missed final exam.**

Add/Drop Deadlines
For a list of all important dates please refer to: [Fall/Winter 2018-19 - Important Dates](#)

<table>
<thead>
<tr>
<th>Last date to add a course <strong>without permission</strong> of instructor (also see Financial Deadlines)</th>
<th>FALL (F)</th>
<th>YEAR (Y)</th>
<th>WINTER (W)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Last date to add a course <strong>with permission</strong> of instructor (also see Financial Deadlines)</td>
<td>Oct. 2</td>
<td>Oct. 23</td>
<td>Jan. 30</td>
</tr>
<tr>
<td>Drop deadline: Last date to drop a course without receiving a grade (also see Financial Deadlines)</td>
<td>Nov. 9</td>
<td>Feb. 8</td>
<td>March 8</td>
</tr>
<tr>
<td>Course Withdrawal Period (withdraw from a course and receive a grade of “W” on transcript – see note below)</td>
<td>Nov. 10 - Dec. 4</td>
<td>Feb. 9 - Apr. 3</td>
<td>March 9 - Apr. 3</td>
</tr>
</tbody>
</table>

*Note: You may withdraw from a course using the registration and enrolment system after the drop deadline until the last day of class for the term associated with the course. When you withdraw from a course, the course remains on your transcript without a grade and is notated as "W". The withdrawal will not affect your grade point average or count towards the credits required for your degree.*

Information on Plagiarism Detection
Turnitin will be used to detect any evidence of plagiarism.

Electronic Device Policy
We will be exploring statistical ideas using free software R and RStudio. Therefore, it is recommended that students bring their own laptop to class to practice statistical activities. However, students are asked to only use their computer for course-related purposes. Electronic devices are not permitted during the midterm test and the final exam.

Attendance Policy
Students are expected to attend all classes as weekly class activities build on the previous week's material.

Academic Integrity for Students
York University takes academic integrity very seriously; please familiarize yourself with [Information about the Senate Policy on Academic Honesty](#).

It is recommended that you review Academic Integrity information [SPARK Academic Integrity modules](#). These modules explain principles of academic honesty.
Test Banks
The offering for sale of, buying of, and attempting to sell or buy test banks (banks of test questions and/or answers), or any course specific test questions/answers is not permitted in the Faculty of Health. Any student found to be doing this may be considered to have breached the Senate Policy on Academic Honesty. In particular, buying and attempting to sell banks of test questions and/or answers may be considered as “Cheating in an attempt to gain an improper advantage in an academic evaluation” (article 2.1.1 from the Senate Policy) and/or “encouraging, enabling or causing others” (article 2.1.10 from the Senate Policy) to cheat.

Electronic Devices During a Test/Examination
Electronic mobile devices of any kind are not allowed during a test or examination. Students are required to turn off and secure any electronic mobile device in their bag which is to be placed under the chair while a test/exam is in progress. Any student observed with an electronic device during a test/exam may be reported to the Undergraduate Office for a potential breach of Academic Honesty.

Academic Accommodation for Students with Disabilities
While all individuals are expected to satisfy the requirements of their program of study and to aspire to do so at a level of excellence, the university recognizes that persons with disabilities may require reasonable accommodation to enable them to do so. The York University Accessibility Hub is your online stop for accessibility on campus. The Accessibility Hub provides tools, assistance and resources. Policy Statement.

Policy: York University shall make reasonable and appropriate accommodations and adaptations in order to promote the ability of students with disabilities to fulfill the academic requirements of their programs.

The nature and extent of accommodations shall be consistent with and supportive of the integrity of the curriculum and of the academic standards of programs or courses. Provided that students have given sufficient notice about their accommodation needs, instructors shall take reasonable steps to accommodate these needs in a manner consistent with the guidelines established hereunder.

For Further Information please refer to: York university academic accommodation for students with disabilities policy.
